

# ① Ideas

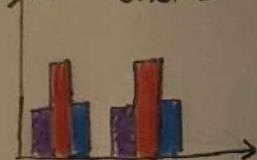

① multiline line chart

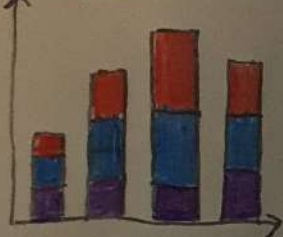

② vertical bar chart

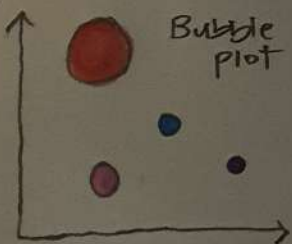

③ grouped bar charts

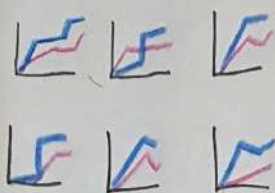

④ stacked bar chart

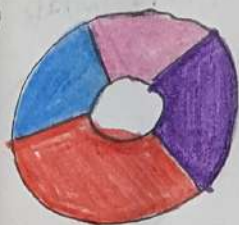

⑤ Bubble plot

⑥ multiple small line charts

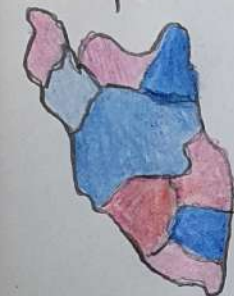

⑦ donut chart

⑧ pie chart

⑨ choropleth map

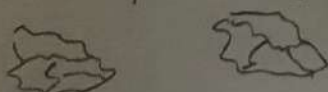

⑩

proportional graduated symbol map

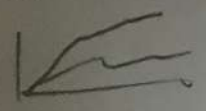

## Combine and Refine

Two maps (side by side)

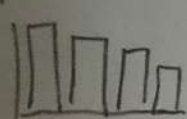

to show the difference in crime for each state in Malaysia

multiline line chart

to show overall trend of crime rates in Malaysia

comparison bar chart

compare Malaysia's crime with other country

## Filter

1) ① and ⑥ are both variants of line charts, so I can keep either one

↳ most probably keep ① as it won't take up a lot of space

2) ②, ③ and ④ are all similar variants of bar charts, therefore only ② would probably be kept

3) ⑨ and ⑩ are also similar mapping style idioms  
↳ for my data, use ⑩

not suitable:

⑤ the bubble plot is probably not suitable as my datasets don't have a correlation between 3 datasets

⑦ and ⑧

the pie chart and donut charts are also not suitable for comparing multiple years, also since my dataset does not equal to 100%.

## Categorise

geospatial (choropleth map for crime cases by state)

temporal (over time) (crime trends over the years)

comparative analysis (bar chart to compare Malaysia's crime index with ASEAN countries)

## Questions

1) which state in Malaysia has the highest assault/property crime type?

2) overall trend of Malaysia's crime over the years

3) How is Malaysia's crime index in comparison to ASEAN countries?
